## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- Claims 1-49 are rejected under 35 U.S.C. 102(e) as being unpatentable over Barnard et al.
   (U.S. 2003/0005100).

Barnard et al. disclose a system and method for fault management in a distributed network management station (20, 3) comprising:

- · initiating a first device coupled to a network (10);
- · broadcasting an information packet to a plurality of devices coupled to the network; and
- resolving status of said first device coupled to said network, wherein said resolving results in said distributed network management station having a defined master device (paragraph [0073]/pages 8-9).
- · wherein said first device initiates as a secondary device (paragraph [0074]).
- wherein said information packet comprises a participating device Internet protocol (IP) of said first device ("DHCP server 75 to assign IP address ...").
- · wherein said information packet also comprises a participating-device message authentication code (MAC) of said first device ("discovery module 84 receives responses from printing devices on network 10 which confirms the existence and identity of each printing device (step S1313)").

Application/Control Number: 10/047,211

Art Unit: 2143

• wherein said information packet further comprises information regarding the previous state of said first device (S2105).

Page 3

- · wherein said information packet additionally comprises information regarding a current state of said first device (S104).
- wherein said information packet further comprises information regarding a total system-uptime of said first device (paragraph [0082]).
- wherein said status between said first device and said plurality of devices is resolved by an evaluation of each said information packet from said first device and said plurality of devices (figs.17, 18).
- wherein said distributed network management station integrates plug-and-play capability of each of the plurality of devices into said network (figs.17 & 18; paragraph [0008]).
- wherein said distributed network management station integrates scalability of each of the plurality of devices into said network (figs. 17 & 18).
- wherein said distributed network management station integrates self-healing capabilities of each of the plurality of devices into said network (paragraph [0106]-[0107]).
- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Pwu whose telephone number is 571 272-6798. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wiley can be reached on 571 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
